REPORT OF THE COMMITTEE OF VISITORS,  
PRESENTED TO THE COURT OF QUARTER SESSIONS,  
JANUARY 2nd, 1860.

---

THE Committee of Visiting Justices now present to this Court the following Report of the state and condition of the County Lunatic Asylum for the past year, ending December 31st.

Two hundred and twenty-two pauper lunatics have been admitted during the twelve months, of whom 104 were males and 118 females.

During the same period, 131 patients have been discharged, of whom 54 were males and 77 females.

Of these numbers 116 were sent away recovered, and 15 relieved.

Of those discharged, 4 females and 1 male have been re-admitted.

Seventy patients have died, of whom 35 were males and 35 females:—out of this number, 34 had only been in the Asylum a few weeks, and most were admitted in a hopeless state of disease.

At the close of the year 1858, there were 459 lunatics in the house, but on December 31st, 1859, the numbers had increased to 480, thus shewing an actual addition of 21 lunatics.

Judging from the admissions and discharges for some years past, the increase of lunatics in the Asylum from the various unions belonging to this county alone, averages 24 annually. The admissions since January, 1859, have been at the rate of  $4\frac{1}{2}$  per week, and the discharges, at  $3\frac{1}{2}$ .

Plans for additional accommodation for 120 patients in the present Asylum were drawn out by the County Surveyor, and were submitted to the Commissioners in Lunacy early in the year.

As any extensive enlargement of the present Asylum was deemed inexpedient by them, your Committee have only carried out one portion of the proposed plan, by which 16 single sleeping rooms for male lunatics have been erected at a cost of £661, being at the rate of £41 and a fraction, per patient. The contractor's bill for the erection of this building has been paid from the balance due to the Asylum in the hands of the Treasurer.

The rooms thus obtained, although valuable for present want, will prove totally inadequate to accommodate the increasing influx of pauper patients. On this subject the Visitors are still in communication with the Commissioners.

The attention of the Visiting Committee has been called to the nuisance arising from the state of the sewers in the immediate neighbourhood of the Asylum, injuriously affecting the health of the inmates; and they would ask the assistance of the Court in providing a remedy.

The Committee have not thought it desirable that any surplus fund should be allowed to accumulate in an Asylum solely maintained for the care of pauper

lunatics. To obviate this they have directed that a quarterly statement of the receipts and expenditure should be made, and that the sums charged for the care and treatment of the patients should be according to the actual cost for the same.

Having regularly visited the Asylum, and at short intervals carefully inspected all its different departments, your Committee are enabled to state that the general appearance of the inmates is satisfactory; and that the different officers and attendants have performed their several duties in a praiseworthy manner.

Signed,        SHREWSBURY AND TALBOT,  
Chairman.

## REPORT OF THE COMMISSIONERS IN LUNACY.

---

Stafford County Asylum,  
19th April, 1859.

WE have yesterday and this day visited the Asylum, inspected all its wards, offices, outbuildings, and premises, and seen all the patients upon the books.

In the course of our inspection of the buildings and land, during a part of which we were accompanied by Lord Lichfield and some other members of the Committee of Visitors, our attention was specially directed to the question of the best mode of providing the necessary additional accommodation for the pauper lunatics of the County.

The subject is one of pressing importance, and the difficulty of adequately dealing with it, is mainly caused by the very limited extent of land, the property of the Asylum or available for the occupation of the patients.

It is sufficient here to state that, whilst the Asylum, which is at present nearly full, contains upwards of 470 patients, and will, with the additions and new arrangements in contemplation, accommodate upwards

of 500, the land in possession of the Asylum, including the site of the buildings and airing courts, and about 30 acres rented by the year, does not exceed 60 acres in extent.

A consideration of these circumstances, and others connected with the locality, independently of the objections on sanitary grounds to the congregation of excessive numbers of insane patients in one building, suggests, in our opinion, the inexpediency of extending the present Asylum, further than by raising the blocks at the extremities two stories, according to the plans which have already received the approval of the Secretary of State. An addition will thereby be provided of 32 beds (16 on each side) in single rooms.

An increased number of beds may conveniently be placed in the top male gallery, and that on the female side is similarly available as an associated dormitory.

By these means it is to be hoped that the immediate wants of the County may be adequately met.

The larger, and more serious questions however, will, no doubt shortly have to be considered, of procuring additional land, and erecting thereon a detached building of a simple character, and cheap construction, as an auxiliary Asylum, or for the residence of working or other particular classes of patients.

In that event it will, we think, be desirable to erect a Chapel conveniently accessible from both branches of the Institution, and to convert the present Chapel into a general dining and recreation hall.

The day rooms are now for the most part crowded, when all the patients belonging to the wards to which they are attached are congregated in them. With a view partially to remedy this defect, we recommend

that arrangements be made for the patients dining in their respective galleries.

The changes in the patients since the last visit of the Commissioners, on the 1st June, 1858, have been as follows:—

	M.		F.	TOTAL.
Admitted.....	97	...	96	... 193
Discharged .....	53	...	56	... 109
Of whom recovered ...	41	...	52	... 93
Died .....	30	...	26	... 56

As respects the causes of death, we have only to report that there has been no disease of an epidemic character. We are informed by Dr. Bower that the majority of the patients admitted are generally in the last stage of bodily disease, and are sent to the Asylum to die there. It appears that nearly all the deaths during the past year took place within twelve months and the greater part within two months after admission. There are at present 14 cases of general paralysis in the Asylum.

Forty-four patients (26 males and 18 females) are registered as under medical treatment, and of these at the time of our visit yesterday, 11 were in bed. One female patient died during our visit. Out of 73 patients admitted since the 1st January last, as many as 56 were described as suicidal. There were in February last, in the Asylum, 92 epileptics.

The Schools continue to be conducted much to the comfort and benefit of the patients, of whom 95 (50 males and 45 females) usually attend three days in the week.

About 170 male patients and 130 females attend the afternoon service on Sundays, and about 130 of

the former, and 100 of the latter, on the Wednesday and Friday evenings.

According to the ward returns, 150 patients of each sex were employed on the 16th instant, viz:—

MALES.	FEMALES.
Grounds..... 69	Laundry, &c.... 14
Shops ..... 40	Needlework ... 127
House..... 41	Kitchen . . . . . 9

On Sunday mornings about 75 of the male patients walk beyond the bounds of the Asylum, and from 55 to 60 females in the front grounds.

There has not since the last visit been any instance of the employment of mechanical restraint. The cases of seclusion have been very few.

The system of night watch is reported to work very satisfactorily. There are two night attendants in each division, who are on duty alternate weeks. During the intervening weeks they assist in the wards as supernumerary attendants. When on duty they go through all the wards every half-hour, get up the wet cases, change the bedding and linen of the wet and dirty, remove noisy patients from associated dormitories to single rooms, specially attend to the epileptics, and administer medicine to the sick, of whom lists are hung up in every ward at 10 p.m. Dr. Bower informs us that one beneficial effect of the system has been materially to diminish the number of wet and dirty cases.

The Farm continues to be a source of profit, varying from about £600 to £850 annually.

The male patients at the time of our visit were free from excitement. Several of the female patients in wards numbers 1 and 6 were much excited and noisy.

The inmates of both sexes were well dressed and clean, and orderly in their personal condition.

The several galleries, day and sleeping rooms, and the beds and bedding throughout the Asylum were clean and in proper order, and the ventilation generally was good.

The dinner yesterday consisted of soup and suet dumpling, and to-day of meat pie and potatoes: the provisions were excellent, ample in quantity, and well cooked.

The day rooms and galleries would be much improved in comfort and aspect by the introduction of more furniture of a suitable description, objects of interest, matting, and curtains to the south windows.

The general condition and management of the Asylum are creditable to the Medical Officers.

R. W. S. LUTWIDGE, } Commissioners  
ROBERT NAIRNE.     } in Lunacy.

## ANNUAL REPORT OF THE SUPERINTENDENT.

---

MY LORDS AND GENTLEMEN,

The Statistical Tables published in these Reports shew an increase of 24 lunatics in this Asylum annually, and as the numbers admitted each year have been found generally to exceed those of the preceding one, no diminution in the influx of patients can for the future be reasonably expected.

Many of the cases of acute insanity received, frequently admit of cure, but very many who are brought here are in a chronic and incurable state, certain to become permanent residents, and destined probably for years to augment the numbers maintained in the house.

As great objections have been made to the retention of these harmless but incurable cases in Workhouses, no decrease in the numbers can therefore be expected from this source, and no other plan but that of increased accommodation will meet the wants of the County.

During the last twelve months various temporary expedients have been adopted to prevent the necessity of refusing admission to violent and dangerous cases ; 21 beds have been placed in one of the galleries, and 16 single rooms have been obtained by building over

one ward ; already these beds and bed-rooms have been occupied, and accommodation on a larger scale must be provided to meet the increasing and unavoidable demands daily made upon the resources of the Asylum.

Lunacy on the increase in this County.

Without entering upon the question of the increase or not of lunacy in general, the returns from the different Unions and the yearly admissions into the Asylum, shew that in this County, at least, the disorder is gaining ground ; a consideration of the nature of the occupations and habits of the operative classes affords an explanation why such is the case.

Causes of increase.

Employment under ground or in buildings, badly ventilated, or exposed to great heat, tends to lower the vital energies, and to render the system unable to withstand the attacks of disease, whether bodily or mental.

Type of insanity in different districts.

It is found that acute mania prevails mostly in districts where the mining and manufacturing classes abound, whilst melancholia, dementia, and the other different forms of mental disease of a low type, come from agricultural districts, and generally arise from want, poverty, or hereditary predisposition.

Frequency of deaths from exhaustion after acute mania.

A careful analysis of the cases admitted during the last 12 months verifies the above remarks ; thus in many of the acute forms the wear and exhaustion of the bodily powers have been so great that the system has sunk under the depressing nature of the malady.

Connexion of insanity and bodily disease.

Table No. IX., "Of the Causes of Death," explains the method in which insanity so naturally follows, and is consequent upon, bodily disease.

Out of 70 deaths upwards of 50 occurred either from pure disease of the brain, or from some complication of such disease: from careful observation it may safely be affirmed, that many, if not the greater portion, of these would never have occurred, had the habits of the patients been different, and had they never been subject to influences tending to foster and encourage such morbid changes. Causes of deaths.

Of the various forms in which disease of the brain presents itself here, general paralysis is one of the most formidable. General paralysis.

Frequently on admission, a slightly feeble state of intellect and a difficulty in articulation are the only symptoms; but although the patient may appear in ruddy health, the fatal termination can with the utmost certainty be predicted.

Ten deaths from this disease took place within the year, and the history of all these cases shews morbid deterioration of the cerebral and nervous systems, produced by habits of habitual intoxication or immoderate indulgence in the use of tobacco.

Eighteen lunatics suffering from this formidable complaint still remain in the Asylum, of whom 17 are males.

As the disease generally runs its course within 12 months—more or less speedily according to the constitution and previous state of health—a fatal termination of all these cases must occur within a few months from this time.

The bodily diseases of the insane are frequently very obscure and difficult to ascertain, in consequence of the inability of the patients to express their Obscurity of bodily disease in lunatics.

sensations, and also of the absence of pain in many of the maladies affecting them.

By careful daily observations alone of their habits, and by constant study of their diseases, can a true diagnosis of their complaints be obtained; this is more especially necessary, as the ordinary treatment adopted for persons of sane mind is frequently unsuited for lunatics.

Immunity  
from  
epidemic  
or local  
complaints.

Upon comparison with the Tables of other Asylums, it is found that the nature and causes of disease in this Asylum do not differ from those of others; there is, however, a singular immunity from fevers and all local or epidemic disorders—not a single case from either of these causes having occurred for some years.

Admission of  
cases of acute  
mania.

It will be seen from Table II. that 43 cases of acute mania have been admitted in the 12 months, being 8 more than in 1858.

This form of disease, although most formidable on admission, frequently proves most tractable and amenable to treatment: the great number of *curable* cases admitted within the year, and the great number *discharged* recovered, may to a certain extent be accounted for, by the increased number of admissions of these acute cases.

Suicidal  
propensity.

A large majority of the lunatics received here are stated in the medical certificates to have shewn suicidal propensities, and in many instances to have attempted self-destruction; most fortunately no one instance of any attempt of this kind has occurred since my last report.

Re-admissions

The re-admissions during 1859 have been less

than in the preceding year. Many persons are only periodically affected with insanity, and sometimes have long intervals of sound mind, extending even to many years. Where the disorder thus manifests itself only occasionally, it is frequently inexpedient that patients should be detained in an Asylum, although in such cases a return may be expected at some future time. For the reasons here mentioned a total exemption from re-admissions can never be expected.

Table VI. indicates no improvement in the amount of education of those admitted: the connexion between this and the state of the mind at first view seems slight; yet by inducing habits of morality and sobriety, exercise of the intellect certainly tends to check, not only crime, but also that morbid state of the brain which causes insanity.

The middle period of life is most prolific of affections of the mind, as may be seen by referring to the Tables for some years past, both in this and most other Asylums.

Between the ages of 30 and 50 the faculties are more called into action, and are subjected to the anxieties and cares of life; an undue proportion of such causes acting on brains predisposed to disease, prove fertile sources of insanity.

Amongst the causes of derangement of mind (as shewn in Table VIII.) are 36 from hereditary predisposition—28 from poverty—36 from various diseases of the brain or other parts of the body—41 from intemperance, and, 22 from puerperal complaints.

Of these, very many patients, under different influences and in different states of society, would have escaped; and it is to be hoped that an advancement in civilization amongst the poorer classes may at some future time lessen such numbers.

Frequency of  
deaths soon  
after  
admission.

Upwards of 50 out of 70 deaths have taken place in patients who have been less than 12 months resident, a fact which cannot be too strongly impressed upon all persons concerned in sending cases to Asylums; any delay upon the part of friends, from mistaken kindness or from a fear of expense, frequently converts curable into incurable cases, and aggravates evils already sufficiently formidable.

Employment.

Employment of the mind and body having always been found essential to the recovery of persons of deranged mind, this part of the treatment has not been neglected: during the last year a greater number of the inmates have been occupied, in various trades or out-door employment, than at any previous time.

Where out-door or other productive labour seems contra-indicated, reading and amusing games are encouraged.

In the employment of the inmates no compulsion is ever used, but the slightest desire to be occupied is immediately taken advantage of, frequently with marked, and often immediate benefit, to the patient.

Attendance at  
Chapel and  
School.

During the year past the congregations at Chapel, where service is performed three times in the week, have frequently exceeded 330, without a

single occurrence of improper behaviour or inattention on the part of any of the persons present.

The numbers attending School have throughout the year averaged 50 in the male and 45 in the female class; the state of mind of the scholars forbids any hope of great improvement, but there cannot be a doubt, but that the School attendance is much liked by the patients, and has a tranquilizing influence upon them.

The directions constantly impressed upon the different officers, attendants, nurses, and all other persons connected with the Asylum, of observing extreme vigilance, and of using kindness and gentleness towards the patients, under all circumstances and in all cases, have been strictly followed out, and no one instance calling for reproof or investigation has occurred.

I have the honour to be,

My Lords and Gentlemen,

Your obedient servant,

MARK NOBLE BOWER.
